Solar energy is our last energy hope. It would solve our energy crisis and water distribution problems. To NOT use our public lands for this purpose is insane. Solar thermal systems to generate Hydrogen should be being set up now. Be environmentally responsible and allow prudently designed systems by 2009. We should be able to see them from space by 2020 and be able to stop importing oil by 2030. We landed on the moon in a decade, we can do this also - provided we don't just study it to death.
B.L. Reed, P.E.
