1. Make sure every location receives an EA and if there's an EIS, it needs EPA review.
2. Review all hardware(solar) installers for each installation(one installer that works in one state may not be applicable for other locations)
3. Evaluate local economy/needs, not just the land
4. Evaluate local culture for each project
5. Do not allow big business or one corporation to monopolize the panels and all the electrical hardware installations and maintenance. Local installers need to be part of the program.
6. Where oil/gas drilling permits conflict with solar possibilities - always choose solar or other renewable sources
7. Please address how the installer is chosen for a specific location.
8. Please address how the sizing of the solar array is determined for a specific location
9. Please address how the billing will be executed
10. Please address how the profits are distributed
11. Please address how savings are determined for each site.
